Concluding Remarks

The academic paper published by Barbier in 1987 on the topic "The concept of sustainable economic development" has shaped the concept of sustainability in economic growth and development, ranking at the top of the list with the highest number of citations. It is followed by two popular books published by Jackson (Prosperity without growth?: The transition to a sustainable economy) and Soubbotina (Beyond economic growth: An introduction to sustainable development). It is evident that the research on sustainable economic growth is ongoing as a popular field in economic analysis.
